

Model 6130 – 3000 gph Water Purification Unit

Safe drinking water is something that is often assumed, but should never be taken for granted. In an earthquake, storm, flood, or civil strife, etc., people are often deprived of their life blood: safe drinking water. The death and rampant sickness that follow disasters are to a great extent, preventable.

The Model 6130 is based on a design originally developed for the US Military as a fast response, medium fresh water purification system that can make all the difference in the world in your next emergency. No systems are as effective as the Model 6120.

Standard Features

High Capacity 3000 gallons (11,365 liter) per hour
